Market Basket Analysis

Ana Luísa Mestre Beatriz Pereira Mariana Domingues Nadine Aldesouky

BUSINESS OBJECTIVES

- Describe any purchasing patterns
- Identify the complementary products
- Identify the substitute products
- Select products requiring increased offerings

DATASETS

- **4 datasets** : orders, order_products, departments and products
- Merged dataframe resulted in 2019501 records and 12 features
- 134 products previously grouped for computational capacity
- 21 departments of varying sizes

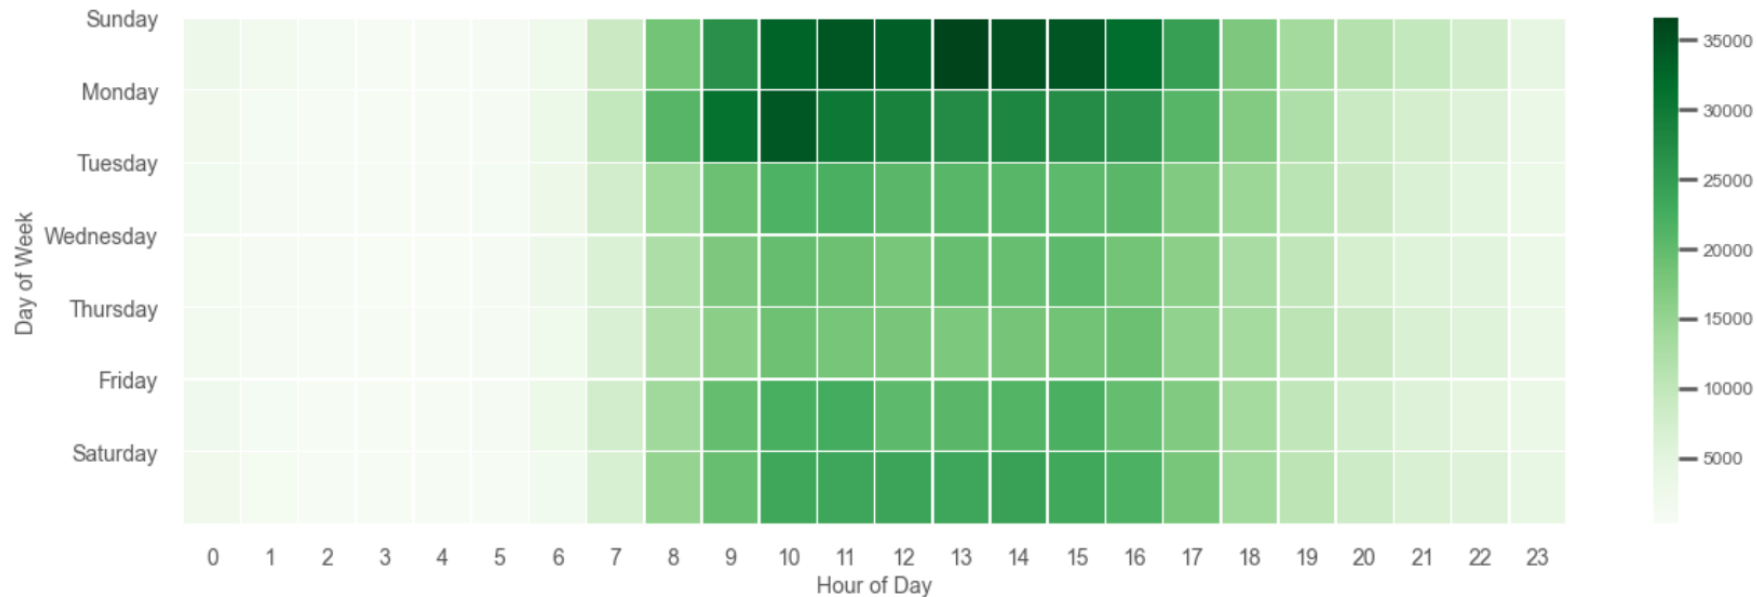

DATA INSIGHTS

Most Frequent Time:
9 am to 4 pm

Most Popular Days:
Sunday
Monday

**Period with Largest
Number of Orders:**
Sunday at 1 pm

75% of orders

< 14 products

**Most Frequent Number
of Products:**
4 to 7

DATA INSIGHTS

Reordered products:
63%

Reorder Rate by user:

- Between 60% and 80% → 25% of users
- 100% → 11% of users
- 0% → 5.6% of users

Reorder Rate by order:

- 100% → 23% of orders
- 0% → 6% of orders

• Top Products Sold:

1. Fresh fruits
2. Fresh vegetables
3. Packaged Vegetables Fruits

• Top Products Reordered:

1. Milk
2. Water Seltzer Sparkling Water
3. Fresh Fruits
4. Eggs

APRIORI ALGORITHM

Market Basket Analysis

1. Select Frequent Item Sets

Support > 3% (= 60 555 orders)

62 products out of 134
397 sets (from 1 to 5 products)

2. Generate the association rules
3. Establish relationships between products

**Support
Frequency**

$$\frac{A \cap C}{U}$$

**Conf.
Strength**

$$\frac{A \cap C}{A}$$

**Expected
Conf.**

$$\frac{C}{U}$$

Lift

*Likelihood of consequent
increases given
an antecedent*

$$\frac{\text{Conf.}}{\text{Expected Conf.}}$$
